

Pond Underliner

Fabric Underliners have been used for decades by commercial pond installers to help prevent the tearing or puncture of the liners of sharp items migrating through the soil. Master Gardner's Pond Underliner is a durable, clean and safe material to install under ponds instead of shifting sand, or carpet padding. Master Gardner's Underliner is constructed of nonwoven polypropylene & polyester that cushions the liner. Using Pond Underliner will lengthen the life of the PVC liner and help protect the liner from puncture by stone or sharp objects while allowing any gas built up under the pond to escape. Easy to use and installs in minutes.
